Pre-cleaner PLRZ-1

This model has been developed to separate impurities coming from the incoming crop.

There is a feed hopper to distribute the product uniformly across the aspiration channel where light impurities are removed.

It is equipped with 2 vibrators screens which ensures efficient grain cleaning.

ADVANTAGES

- Easy operation and maintenance;
- Allows installation of cyclone at the fan outlet;
- High and efficient production with low energy consumption;
- Very compact;
- Works with a variety of crops.

FEATURES

The flow rate and aspiration system have fine control adjustments.

OPTIONAL

- Bucket elevator for inlet and outlet;
- Sieves for a wide variety of crops.
